

design consultancy for fuses

do you need design or development advice?
do you have your fuses tested on a regular basis?

Although a fuse is an important device in an electrical circuit many people do not appreciate how dangerous a badly made or faulty fuse can be.

ERA offers development testing and design consultancy. Our many years of experience can be useful to you during your product design stage. Prototype fuses can be tested or assessed to enable tweaks in the design before full-blown production begins.

ERA tests fuses for ASTA-BEAB certification Services and BSI Testing on a regular basis for all the major players in the fuse market. New fuses are tested for full compliance to their relevant standard and check tests are then performed on a regular basis to monitor the quality of production. If you are importing or manufacturing fuses to be used in this country, they must be tested to their relevant standards. Failure to do so will leave you open to prosecution by the authorities and should a faulty fuse end up in a product it could prove fatal.

Let ERA help you in the design process to make your fuses work or just test them for you.

Please contact us at the electrical testing laboratory UKAS 0512:

ERA Technology

ERA Technology works at the leading edge of many advanced technologies. The business was founded in 1920 and today provides specialist, high value-added, technology-based services including design and development, testing, assessment and expert advice.

ERA's services reduce technical and commercial risk, improve the operational performance of engineering infrastructure assets, and enhance the competitiveness of products and systems.
